THE CHALLENGES COMPANIES FACE TODAY

Most organizations believe in giving freedom to their employees. While this helps in enhancing workplace efficiency and productivity, some employers take undue advantage of their employees policy of giving them unlimited or unrestricted access to the internet. Research shows that the world wide web, or rather its misuse, is a major contributor to the loss of productivity in offices across industries. Besides, internet misuse is a major cause of embarrassment for female colleagues in offices. They often come across objectionable content in systems previously used by their male colleagues to access obscene sites. This has emerged as a major threat to the sanctity and decorum of the workplace.

Internet subscribers with fixed Public Internet Protocols are prone to constant threats from hackers and potential cyber criminals. Thankfully, most activities on the world wide web can be tracked by cyber patrolling through the user's unique IP address. This has proved to be very effective in tracing the source of cyber crimes. However, some tech-savvy hackers have still managed to evolve new techniques of hijacking IPs and commit crime in the cyber world. They have even ensured evasion from being traced. In this scenario, it is the innocent internet subscriber who is at risk of facing the cyber sleuths.

Without an Employee internet management solution, your company is vulnerable to:

- * Decreased productivity
- * Data security risks
- * Computer viruses
- * Malware.

Losing sleep over productivity loss due to internet abuse in your office?

Presenting

Your defense against internet abuse.

EXISTING SOLUTIONS

The hazards of unrestricted internet access can be averted by installing expensive Hardware and Software Firewalls, UTM (Unified Thread Method) gateways and various combinations of the two. However, such preventive solutions are deployed by different suppliers. So offices have to incur large capital costs as well as recurrent license renewals costs. Since these solutions incur huge capital expenditure, customers don't have an option but to continue with them, even if most of them are lying ineffective and are causing productivity losses.

WHERE DO EXISTING FIREWALL SOLUTIONS LAG BEHIND ?

- * Routers and services involve huge capital expenditure
- * Difficult to customize as per specific requirements
- * Comprehensive solutions involve high initial costs.
- * Designed for large corporates; hence involve high maintenance and customization costs
- * Separate applications do not seamlessly integrate with existing solutions
- * Subscription-based, hence no privacy

A REVOLUTIONARY SOLUTION

SECURE NOT JUST YOUR BUSINESS, YOUR PEACE OF MIND, TOO!

Presenting GreenX, a simple, flexible solution to monitor, filter and control inappropriate use of the Internet. Behind this amazing solution is Green Vision Pvt. Ltd., a company that knows its business - and yours too. It is a testimony of our years of rich experience and speaks volumes about our philosophy:

"We are so keen to sell unless we earn, not just money and fame but your trust as well."

True to its name, GreenX has safely eliminated the deficiencies of the existing solutions in the market. It enhances your business productivity and enables your employees to spend quality time at work. GreenX puts you in control of each users web browsing, file transfers, news, chat, e-mail and instant messaging usage.

The access policy of GreenX can divide your employees in various user groups, based on their seniority, maturity, job responsibility, among others. These groups may be given full or restricted access based on the IP or MAC address of the user, web sites to be browsed, time of the day, days of the week, etc.

**CUSTOMIZABLE TO YOUR SPECIFIC IT ENVIRONMENT
EASY-TO-USE AND RELIABLE !**

- * A solid state hardware appliance based on the same code used by leading MNCs.
- * Tailor-made to customer needs: Low overheads, ensures optimum usage of all the features.
